PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience shipping products at scale — from a healthcare platform with 2M+ active users to the flagship banking app of ICA Banken (Sweden) — and delivering complete fullstack systems for freelance clients. Fullstack work in Python (FastAPI, Django), React, TypeScript, and PostgreSQL, deployed on AWS and Azure, with LLM integration via the Claude SDK; native mobile in Swift, Kotlin, and Flutter. MSc in Data Science with peer-reviewed publications in NLP and IoT systems.

TECHNICAL EXPERIENCE

Software Engineer (Consultant for ICA Banken) **November 2025 – Present**
Zendev

- Developing the flagship iOS banking app of ICA Banken, one of Sweden's major retail banks, with a focus on secure data traffic and banking-grade security standards.
- Took ownership of the consents and loyalty systems integration, independently coordinating with the design team, product owner, and platform developers across the bank.
- Taking full ownership of features from design through release, maintaining and extending core flows of the app.

Software Engineer **September 2022 – November 2025**
Klika

- Developed and maintained an enterprise-scale healthcare iOS app with 2M+ active users, leveraging BLE for medical device connectivity and data sync.
- Drove a major app redesign and an architectural migration to Clean Architecture (VIP pattern), improving maintainability and testability across the codebase.
- Implemented BLE workflows for secure pairing, data streaming, and firmware updates; built WiFi provisioning for IoT devices and led development of push notifications.
- Held release responsibilities for the App Store, contributing to strong App Store ratings.
- Used Combine for reactive data handling and PromiseKit for asynchronous operations; implemented third-party in-app purchases.
- Consulted on the Swift SDK of a global advertising platform serving millions of ads per day on mobile devices, incorporating async/await to handle high-volume asynchronous network requests with improved efficiency and reduced boilerplate.

iOS Internship Mentor **July 2024 – September 2024**
Klika

- Led the mobile internship guild of 4 developers (2 native iOS, 2 Flutter), guiding them through code reviews, best practices, and architectural decisions.
- Organized weekly knowledge-sharing sessions and tracked individual progress; the interns' final product was an Employee Management solution that is actively used in production.
- 2 of 4 mentees passed the company hiring process.

Fullstack & Flutter Developer (Freelance) **June 2025 – September 2025**
Client under NDA (Bosnia and Herzegovina)

- Built a vending machine fleet management system covering 1,000+ machines across 10 cities, operated by a 5-person field team — PHP backend, JavaScript frontend, real-time inventory tracking, and automated workflows.
- Engineered a BI dashboard with employee performance metrics, machine profitability analysis, and service duration tracking over large datasets with complex SQL.
- Architected a cross-platform Flutter app for field employees and managers: NFC sign-in/out at machines, BLE machine interactions, GPS, and barcode scanning of products.

Fullstack Developer (Freelance) **June 2024 – October 2025**

Client under NDA (United States)

- Developed a web-based hiring and workforce management platform for a gig-economy moving company, matching independent drivers with trucks to customer requests, similar to ridesharing platforms.
- Automated generation of official documents and contracts required for legal and operational compliance, streamlining administrative workflows.
- Built native Android (Kotlin, Jetpack Compose) and iOS (Swift) apps enabling drivers to receive job offers, update statuses, manage schedules, and submit paperwork from their devices.

Developer & Maintainer (Freelance) **June 2024 – July 2025**

Client under NDA (Bosnia and Herzegovina)

- Developed and maintained a modern e-commerce site for a hardware tools store — product and order management plus payment processing compliant with PCI DSS and 3D Secure.
- Automated Python price-comparison and product scrapers, social media advertising posts, and promo-material generation.

EDUCATION

Master of Science in Data Science

International Burch University — Faculty of Engineering and Natural Sciences

Graduated June 2025. Thesis: "Decoding Digital Humor: A Machine Learning Approach to Meme Sentiment Analysis" (multimodal NLP + computer vision). Co-authored two peer-reviewed publications.

Bachelor's degree in Information Technology

International Burch University — Faculty of Engineering and Natural Sciences

Graduated June 2023.

Erasmus+ Exchange

Universidad de León — School of Engineering

Completed June 2023.

CORE EXPERTISE

Python, FastAPI, Django, React, TypeScript, JavaScript, PostgreSQL, SQL, AWS, Azure, REST APIs, OAuth, LLM Integration (Claude SDK, Ollama, structured output), PHP, Java, Firebase, CI/CD, GitHub Actions, Automated Testing, A/B Testing, System Design, Swift, SwiftUI, UIKit, Combine, async/await, PromiseKit, Clean Architecture (VIP), MVVM, Kotlin, Jetpack Compose, Flutter, Dart, BLE / CoreBluetooth, NFC, Push Notifications, In-App Purchases, App Store Release Management, Machine Learning / AI, NLP, Data Science, IoT Systems, Web Scraping & Automation, Secure Data Traffic, PCI DSS / 3D Secure, Project Management & Mentoring

PROJECTS

AI CV Tailor **2026**

- Local-first LLM application that tailors a master CV to any job description: Python/Streamlit app orchestrating a locally hosted LLM (Ollama) with structured JSON output, automated CV parsing and merging with deduplication logic, and templated PDF generation via WeasyPrint.
- Fully offline by design — no personal data ever leaves the machine.

PUBLICATIONS

Designing Smart IoT System for Urban Waste Collection in Sarajevo **2025**

Springer, Lecture Notes in Networks and Systems vol. 1625 — Advanced Technologies, Systems, and Applications X (IAT 2025), pp. 102–117

IoT + ML architecture for real-time monitoring, predictive analytics, and route optimization of urban waste collection.

Safet Alsović: Comparison of Methods for Generating Sevdah Music Lyrics **2024**

International Symposium on Innovative and Interdisciplinary Applications of Advanced Technologies (IAT 2024)

First NLP study of Bosnian Sevdalinka lyric generation — LSTM approaches vs. fine-tuned BERT on a self-collected corpus.

CERTIFICATIONS

- AWS Academy Graduate — Cloud Foundations, Cloud Operations & Cloud Web Application Builder — Amazon Web Services (2023)
